Subject: September 20 Site Assessment Conference Call Agenda

Here is the agenda for tomorrow's regional site assessment conference call. Note that I am forwarding a second E-mail which contains an issue that Jim McCreay wants to discuss. The second attachment below is the list of sites discussed in the article. You may want to glance at Jim's message and list of sites in your region before the call.

There is extra time on the agenda if anyone has other issues you'd like to discuss. Again, the call-in number is (202) 260-7280, 6238#; Time: 11:00 Eastern time. Will talk to you soon.

Lead-Filled Lots Study Says Potentially Toxic Sites Unlisted

By Rose Palazzolo

abcNEWS.com

April 3 — Hundreds of former lead smelting factory sites, some next to residential neighborhoods, could contain toxic levels of lead and no regulatory agency is aware of them, according to a new survey.

The study, released in the *American Public Health Journal*, cites 430 former lead smelting factories that are apparently not listed by the Environmental Protection Agency or local Health Departments.

"It's a potentially dangerous finding," said William Eckel, who conducted the study as part of his doctoral thesis at George Mason University in Fairfax, Va. He did the investigation in collaboration with his advisor, Gregory Foster and Michael Rabinowitz, a geochemist with the Marine Biological Laboratory in Woods Hole, Mass.

In the study, Eckel lists the sites of 640 former lead smelting factories in 35 states, which he says are filled with potentially hazardous levels of lead in the soil. Most of the sites are concentrated in industrial centers including Brooklyn, N.Y., Detroit, Baltimore, Los Angeles and Chicago. Eckel said he found the sites by looking in old industry directories and cross checked his findings with federal and state databases. He spent six years combing through the databases and books.

Lead smelting factories reclaim the lead in items such as car batteries and convert it back to pure lead and lead alloys. To counter the leeching of contaminants sites are either paved over or cleaned up by EPA officials. But Eckel claims that at least 430 or two-thirds of former lead smelting sites he identified were not known by the EPA or by State Departments of Health and therefore weren't paved over or cleaned up.

Although Eckel currently works at the Environmental Protection Agency, the EPA had nothing to do with his study and would not comment on the findings.

"It's impossible for us to comment on a study that we haven't even seen," said EPA spokesman Chris Paulitz. "Also, it is hard for us, as a new agency, to comment on what a previous agency [under former President Clinton] may or may not have done in terms of listing potential hazardous sites."

Potential For Great Lead Damage

Eckel, who now works at the pesticides division of the EPA, said that his study should send out an alarm. "If these sights are still contaminated and haven't been paved over there is potential for great lead damage here," he said.
